# INTAKE AND EXHAUST DIAGNOSIS

#### INTRODUCTION

M1151006900246

Intake leaks usually create driveability issues that are not obviously related to the intake system. Exhaust leaks or abnormal noise is caused by cracks, gaskets and fittings, or by when the exhaust pipe or muffler is damaged due to impacts during travel. The exhaust leaks from these sections and causes the exhaust noise to increase. There may be cases when the system contacts the body and vibration noise is generated.

#### TROUBLESHOOTING STRATEGY

M1151007000246

- Use these steps to plan your diagnostic strategy. If you follow them carefully, you will be sure that you have exhausted most of the possible ways to find an intake or exhaust system fault.
- 1. Gather information from the customer.
- 2. Verify that the condition described by the customer exists.
- 3. Find the malfunction by following the Symptom Chart.
- 4. Verify malfunction is eliminated.

#### SYMPTOM CHART

M1151007100243

SYMPTOM	INSPECTION PROCEDURE	REFERENCE PAGE
Exhaust Leakage	1	P.15-2
Abnormal Noise	2	P.15-3

#### SYMPTOM PROCEDURES

#### **INSPECTION PROCEDURE 1: Exhaust Leakage**

#### **DIAGNOSIS**

STEP 1. Start the engine. Have an assistant stay in the driver's seat. Raise the vehicle on a hoist. Have the assistant rev the engine while searching for exhaust leaks.

Q: Is the exhaust leaking? YES: Go to Step 2.

**NO**: The procedure is complete.

STEP 2. Check the gasket for cracks, damage.

Q: Is the gasket damaged?

YES: Replace the gasket, then go Step 1.

NO: Go to Step 3.

STEP 3. Check for loosening in each coupling section.

Q: Is there any loosening in each section?

**YES**: Tighten, then go to Step 1. **NO**: There is no action to be taken.

**TSB Revision** 

#### **INSPECTION PROCEDURE 2: Abnormal Noise**

#### **DIAGNOSIS**

STEP 1. Start the engine. Have an assistant stay in the drivers seat. Raise the vehicle on a hoist. Have the assistant rev the engine while searching for exhaust leaks.

Q: Is any abnormal noise generated?

YES: Go to Step 2.

**NO**: The procedure is complete.

STEP 2. Check for missing parts in the muffler. Tap the muffler lightly to check for loose baffles, etc.

Q: Are there any missing parts in the muffler?

YES: Replace, then go to Step 1.

NO: Go to Step 3.

STEP 3. Check the hanger for cracks.

Q: Is the hanger cracked?

**YES**: Replace, then go to Step 1.

NO: Go to Step 4.

STEP 4. Check for interference of the pipes and muffler with the body.

Q: Are the pipes and muffler interfering with the body?

YES: Repair, then go to Step 1.

NO: Go to Step 5.

STEP 5. Check the heat protectors.

Q: Are any heat protectors loose or damaged?
YES: Tighten or replace, then go to Step 1.

NO: Go to Step 6.

STEP 6. Check the pipes, catalytic converters and muffler for damage.

Q: Are the pipes, catalytic converters and muffler damaged?

**YES**: Replace, then go to Step 1 (For the removal of the catalytic converter, refer to

GROUP 17 P.17-122).

**NO**: There is no action to be taken.
